

Scenario3: Generate the test cases to test the cart functionality

Output:

Test Case ID	Test Scenario	Test Steps	Expected Result
CART_001	Verify adding a single product to cart	1. Open product page.2. Click "Add to Cart".	Product should be added successfully and cart count should increase.
CART_002	Verify adding multiple products to cart	1. Add different products to the cart.	All selected products should appear in the cart.
CART_003	Verify adding the same product multiple times	1. Add a product.2. Add the same product again.	Quantity should increase or duplicate items should be displayed according to business rules.
CART_004	Verify cart icon count	Add products to cart.	Cart icon should display the correct item count.
CART_005	Verify cart page navigation	Click the cart icon.	User should be redirected to the cart page.
CART_006	Verify product details in cart	Add a product and open cart.	Product name, image, SKU, price, and quantity should be displayed correctly.
CART_007	Verify quantity increase	Increase quantity using "+" button.	Product quantity and total amount should update correctly.
CART_008	Verify quantity decrease	Decrease quantity using "-" button.	Quantity and total price should be updated correctly.
CART_009	Verify minimum quantity restriction	Reduce quantity below minimum allowed value.	System should prevent quantity below the minimum limit.
CART_010	Verify maximum quantity restriction	Increase quantity beyond the allowed limit.	Appropriate validation message should be displayed.

Test Case ID	Test Scenario	Test Steps	Expected Result
CART_011	Verify manual quantity update	Enter a valid quantity manually.	Quantity and total amount should update correctly.
CART_012	Verify invalid quantity input	Enter alphabets, special characters, negative values, or decimals.	System should display validation message and reject invalid values.
CART_013	Verify item removal from cart	Click "Remove" against a product.	Product should be removed successfully.
CART_014	Verify removing all items from cart	Remove all products.	Cart should become empty and display an empty-cart message.
CART_015	Verify cart persistence after page refresh	Refresh the cart page.	Cart items should remain unchanged.
CART_016	Verify cart persistence after logout and login	Add items, logout, and login again.	Cart contents should be retained according to business rules.
CART_017	Verify cart persistence across browser sessions	Close and reopen browser.	Previously added items should be retained if supported.
CART_018	Verify subtotal calculation	Add multiple products with different prices.	Subtotal should equal the sum of all item prices.
CART_019	Verify tax calculation	Add taxable products.	Tax amount should be calculated correctly.
CART_020	Verify shipping charges calculation	Add products with shipping fees.	Shipping charges should be calculated correctly.
CART_021	Verify grand total calculation	Add products and apply charges.	Grand total should equal subtotal + tax + shipping charges.
CART_022	Verify discount coupon application	Enter a valid coupon code.	Discount should be applied and total amount updated.

Test Case ID	Test Scenario	Test Steps	Expected Result
CART_023	Verify invalid coupon code	Enter an invalid coupon code.	Appropriate error message should be displayed.
CART_024	Verify expired coupon code	Apply an expired coupon.	Coupon should not be applied and validation message should appear.
CART_025	Verify removing coupon	Remove an applied coupon.	Discount should be removed and total recalculated.
CART_026	Verify out-of-stock product behavior	Product becomes out of stock after adding to cart.	Appropriate message should be displayed and checkout restrictions applied.
CART_027	Verify low-stock warning	Add a product with limited inventory.	Low-stock notification should be displayed.
CART_028	Verify cart with zero inventory item	Attempt checkout with unavailable items.	User should not be allowed to proceed.
CART_029	Verify price update when product price changes	Add a product and update its price in backend.	Cart should reflect updated pricing as per business rules.
CART_030	Verify save-for-later functionality	Move a product to "Save for Later".	Product should be removed from cart and added to saved items.
CART_031	Verify moving saved item back to cart	Move saved item to cart.	Product should be added back successfully.
CART_032	Verify empty cart checkout	Click checkout without products.	User should not be allowed to proceed.
CART_033	Verify checkout button availability	Add products to cart.	Checkout button should be enabled.
CART_034	Verify guest user cart functionality	Add products as a guest user.	Guest cart should function correctly.
CART_035	Verify registered user cart functionality	Add products as a logged-in user.	Cart should function correctly.

Test Case ID	Test Scenario	Test Steps	Expected Result
CART_036	Verify cart synchronization across devices	Add items on one device and login from another.	Cart items should synchronize correctly.
CART_037	Verify duplicate item prevention	Add identical products rapidly.	Duplicate entries should follow business rules.
CART_038	Verify cart behavior on browser back button	Add product and navigate using browser back button.	Cart data should remain intact.
CART_039	Verify cart response time	Add and remove items repeatedly.	Cart operations should complete within acceptable performance limits.
CART_040	Verify concurrent updates to cart	Update the cart from multiple sessions simultaneously.	Cart should maintain data consistency.
CART_041	Verify special characters in coupon field	Enter special characters and scripts.	System should validate input and prevent injection attacks.
CART_042	Verify SQL injection in quantity/coupon fields	Enter malicious SQL statements.	Application should sanitize input and prevent attacks.
CART_043	Verify XSS vulnerability in cart fields	Enter JavaScript code in editable fields.	Scripts should not execute.
CART_044	Verify cart functionality with network interruption	Disconnect network during cart update.	Proper error message and recovery mechanism should be provided.
CART_045	Verify cart after browser refresh during update	Refresh while quantity update is in progress.	Cart data should remain consistent.
CART_046	Verify unsupported products combination	Add incompatible products together.	Appropriate validation message should be displayed.

Test Case ID	Test Scenario	Test Steps	Expected Result
CART_047	Verify currency display in cart	Change currency settings.	Prices should be displayed in selected currency.
CART_048	Verify cart accessibility	Navigate cart using keyboard and screen readers.	Cart should meet accessibility requirements.
CART_049	Verify mobile responsiveness of cart page	Open cart on different screen sizes.	UI should render properly on mobile and tablet devices.
CART_050	Verify cart data after successful order placement	Place an order.	Cart should be cleared and order should be created successfully.

Prompt using ICEPOT

Context:

Act as a Senior Software Test Engineer for a Supply chain domain and e-commerce application

Instruction:

[MANDATORY] Generate testcases for testing Cart functionality

[MANDATORY] User should be able to Add, delete, update items in the cart

[STRICT] should be able to navigate back to the product link from the cart

[CRITICAL] Max items allowed within the cart should not exceed 20

[STRICT] Should be able to make payments from the cart

[CRITICAL] Verify promotional offers and combo products

[MANDATORY] Should not proceed further if the product in the cart is no longer available

[MANDATORY] Include Postive and negative cases

[MANDATORY] Include both Functional and NonFunctional test cases

Example:

TCID | Description | Priority | Steps | Expected Result

Persona:

Act as a Test lead to review the testcases for accuracy and provide the score

Output:

Create a Downloadable excel format file

Tone:

Professional Tone with clarity

Output:

Cart_Functionality_TestCases_Reviewed.xlsx
